## Description

| | |
|---|---|
| **Steps** | 1. Send a GET request with a valid API key to the Turbulence URL in Test Data<br>2. Check the `turbulenceReport.severity` field of every item in the response |
| **Expected Result** | • Every `severity` is one of the documented values: *(light, moderate, severe, extreme)*<br>**spec:** postair-weather-api.yaml, GET /turbulence, 200 response, `severity` field |

| | |
|---|---|
| **Actual Result** | • 34 of 100 items return `severity: "mild"`, which is not a documented value<br>• The spec lists `light`; this value never appears in the response |
| **Bug Severity** | Medium |
| **Environment** | • PostAir Weather API v1<br>• Postman Collection Runner |
| **Test Data** | **Turbulence:** `https://education.postmanlabs.com/v1/weather/turbulence` |
| **Evidence** |  |
